**City Park Quality Rating**

- 4 - Greater Range of Facilities
- 3 - Narrow Range of Facilities
- 2 - Minimal Improvements
- 1 - Undeveloped

**Note:** Parks Service Area is defined by travelling 1/2 mile on streets or trails/paths from regional parks. This is the metric used in the 10-minute walk program (NRPA, TPL, ULI). It is also the same distance the National Parks Service and Centers for Disease Control and Prevention use when they link park access and public health. Distances from parks are calculated along a network consisting of Port Townsend street centerlines and trails/paths. A 50 ft. buffer was used on the parks layer in order to ensure an intersection between the transportation network used and the park inventory. Any intersection where a street or trail/path crosses a park boundary is considered an access point for that given park, and is used as a point from which distance traveled is calculated.
